

Are Households Ready for the Next Recession?

Evidence, Implications, and Policy Responses

Claudia Sahm

December 3, 2019

New York Association for Business Economics

NO, households are never ready

Many households always have thin financial buffers

Source: [Survey of Household Economics and Decisionmaking](#).

- 4 in 10 adults in 2018 said that would not use cash or its equivalent to pay a \$400 unexpected expense.

Some households are particularly vulnerable

Racial and ethnic minorities are often less prepared

Source: [2018 Survey of Household Economics and Decisionmaking](#).

- Blacks and Hispanics about twice as likely as white to not be confident that credit card application would be approved.

Recessions should be **AVOIDED**

Negative effects during recessions:

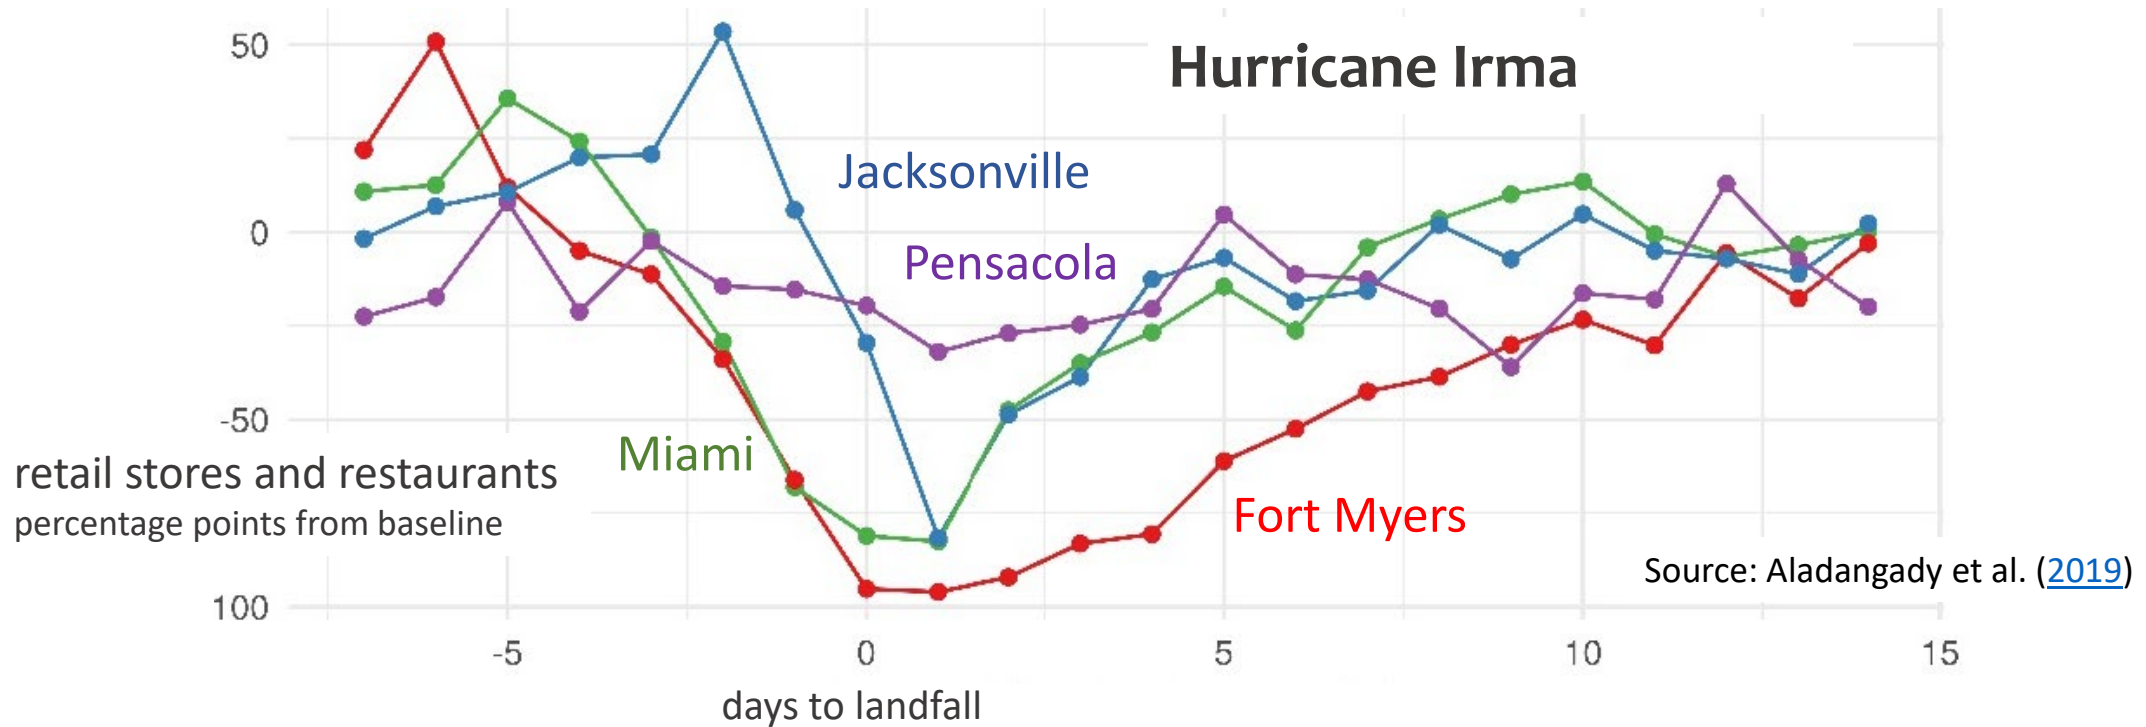

- Harm to many individuals, families, and businesses.
- Resources in economy are not fully employed.

Negative effects after recessions:

- Unemployed, started career, lost home or business, etc.
- Last decades or lifetimes.

Need to know when recession looms

Exploring new Big Data sources for tracking economy

- Retail sales with geographic detail—already used during hurricanes—could monitor spread of regional weakness.

Need to know when recession starts

Early action could reduce damage from recession

- Sahm rule: $\frac{1}{2}$ percentage point increase in 3-month average unemployment rate relative to prior 12 months = in recession.

Policies should fight against recessions

Deploy broad range of policies:

- Fiscal, monetary, regulatory, etc.
- “And-both” not “either-or” approach.

Use and build on experience:

- Learn lessons: do not reinvent the wheel.
- Economy changes: do not fight the last war.

WHY automatic payments to individuals?

- Consumer spending is large share of demand.
- Research shows consumers spend out of stimulus.
- Payments to individuals should be large and simple.
- Automatic in a recession allows commit and prepare.

HOW automatic payments to individuals?

- **Large total**: 1% of consumer spending, \$150 billion
- Payments **large for individuals**, \$500 to \$1,000.
- **One-time** more effective than same dollars over time.
- **Tell people** payments are sent to **help them**.
- In severe recessions, **continue** payments annually.

Many OTHER automatic stabilizers to use

Recession Ready other proposals:

- Unemployment insurance
- Federal support of States
- Infrastructure
- Assistance for needy families
- Food stamps
